*Acacia atrox* subsp. *atrox* occurrence map.  
Occurrence map generated via Atlas of Living  
Australia (<https://www.ala.org.au>).

### Family

Fabaceae

### Distribution

Known only from the Inverell area, N.S.W. Listed as an Endangered Species under the *NSW Threatened Species Conservation Act*, 1995.

### Description

**Shrub** mostly 0.5–2 m high, oldest plants to 4 m. Phyllodes **rigid**, 2–4.5 cm long, 1–1.2 (–1.5) mm wide, longitudinally splayed at base for 2–6 mm, gradually tapered at apex to **cusps** 1.5–3.5 mm long; ±8-nerved (a yellow one at apex of each angle and an obscure or incomplete one inbetween). Peduncles 5–21 mm long; heads 17–25-flowered, 5–7 mm diam. (dry).

### Phenology

Flowers May–July.

### Habitat

Grows in deep clay soils over basalt on upper slope and crest of low hill in eucalypt woodland-pasture area.

### Specimens

N.S.W.: Myall Creek Stn, *T.Tame 6285* (BRI, CANB, MEL, NE, NSW, PERTH).

### Notes

Very similar to subsp. *planitiicola*, particularly in habit, bark, phyllodes (sessile, sharply pungent and with distinctively dilated bases), floral features and *Hakea* fruit-like galls.
