Acacia browniana var. *intermedia* occurrence map.
Occurrence map generated via Atlas of Living Australia (<https://www.ala.org.au>).

Family

Fabaceae

Distribution

Sporadic from Boyagin Rock S to Porongurup Ra., W.A.

Description

Shrub 0.5–1.5 m high. **Branchlets** puberulous to shortly pilose, sometimes villous; hairs \pm patent and straight. **Distal pinnae** 2–6 (–12) mm long; pinnules 2–5 pairs, 2–4 mm long, 1–1.5 mm wide, with recurved to revolute margins, slightly thickened, sparsely to densely puberulous to hirsutellous. Flower-heads light golden to mid-golden.

Habitat

Grows in shallow sandy or rocky soil, usually in Jarrah (*Eucalyptus marginata*) forest or mallee communities.

Specimens

W.A.: Boyagin Rock Reserve, *M.D.Crisp 6658* (PERTH); half way up Bluff Knoll, Stirling Ra., *B.R.Maslin 1101* (K, PERTH).

Notes

Branchlet and pinnule indumentum on specimens from the north of the range is usually more conspicuous than on those from the Stirling and Porongurup Ranges. Sometimes confused with var. *endlicheri*.
