### Family

Fabaceae

### Notes

This variant is described, illustrated, mapped and discussed under *A. caesaneura* in B.R.Maslin & J.E.Reid, *Nuytsia* 22: 194, 196–197 (2012).

The generally poorly developed branchlet resin of *A. caesaneura* was described by B.R.Maslin & J.E.Reid, *Nuytsia* 22: 190 (2012) as being opaque but sometimes interspersed with patches of translucent resin. Subsequent reassessment of specimens has shown that in *A. caesaneura* (narrow phyllode variant) the branchlet resin can sometimes be all translucent.
