Acacia desertorum var. *nudipes* occurrence map.
Occurrence map generated via Atlas of Living Australia (<https://www.ala.org.au>).

Family

Fabaceae

Distribution

Restricted to areas between Southern Cross and Boorabbin, W.A.

Description

Phyllodes 16-nerved but often only 8 nerves visible when young (the nerves of unequal width), **glabrous** or **appressed-hairy** between nerves. Peduncles normally solitary, stout, 0.5–0.8 mm diam., longitudinally ridged when dry, not **resinous**, **glabrous** or subglabrous (no resin hairs). Sepals 1–1.1 mm long, c. 1/2 length of petals.

Habitat

Grows on yellow sandplains and lateritic gravel, in heath and tall open shrubland.

Specimens

W.A.: Koorawalyee, *J.S.Beard* 6238 (PERTH); 12.6 km E of Southern Cross on Great Eastern Hwy, *B.R.Maslin* 2388 (PERTH); 10 km SE of Ghooli, c. 19 km SE of Southern Cross, *K.Newbey* 6022 (PERTH).

FOA Reference

Data derived from *Flora of Australia* Volumes 11A (2001), 11B (2001) and 12 (1998), products of ABRS, ©Commonwealth of Australia

Author

R.S.Cowan, B.R.Maslin
