Acacia isoneura subsp. isoneura occurrence map.
Occurrence map generated via Atlas of Living Australia (<https://www.ala.org.au>).

Family

Fabaceae

Distribution

Occurs in the Mingenew-Three Springs area.

Description

Phyllodes **filiform**, slender (0.5–0.6 mm diam.), soft, flexible; nerves 0.2 mm wide. Spikes paired within **phyllode** axils, rarely single. Seeds pale brown **mottled** yellow.

Habitat

Grows in sand.

Specimens

W.A.: near Mingenew, R.Coveny 3079 (NSW, PERTH); loc. not cited, L.Diels 4270 (PERTH, fragment ex B); 13 km W of Three Springs, 28 Aug. 1972, C.Chapman s.n. (PERTH).

Notes

Superficially similar to *A. coolgardiensis* which is recognised by shorter spikes, 5-merous flowers and terete pods.

FOA Reference

Data derived from *Flora of Australia* Volumes 11A (2001), 11B (2001) and 12 (1998), products of ABRS, ©Commonwealth of Australia
