#### Family

Fabaceae

#### Specimens

W.A.: 16 km SW of Halls Creek (0.1 km NE of turn-off to Carranya Stn at Koongie Park), *B.R.Maslin* 7156 (PERTH). N.T.: 63 km S of Tennant Creek on Stuart Hwy, *B.R.Maslin*, *M.McDonald* & *G.Leach* BRM 7454 (CANB, DNA, PERTH). Qld: 12 to 17 km N of Mount Isa on Barkly Hwy, *L.Thomson* LXT 19 (PERTH).

#### Notes

This variant was first recognized in M.W.McDonald & B.R.Maslin, *Austral. Syst. Bot.* 10: 315 (1997). It was subsequently noted under *A. elachantha* by M.W.McDonald, *Fl. Australia* 11B: 180 (2001), and in *WATTLE Acacias of Australia* CD-ROM (2001).

While further study is needed to assess the taxonomic status of *Acacia* sp. *Urandangie* (L.Pedley 2025) it is readily distinguished from typical *A. elachantha*, with which it is sometimes sympatric, by the absence of hairs on its new shoots, branchlets, phyllodes and ovaries. Both variants occur in W.A., N.T. and Qld but the typical one appears to be the more common. See M.W.McDonald & B.R.Maslin (*loc. cit.*) for further discussion.
